**FEDERAL PROFESSIONAL SERVICES MARKET  
TO REACH \$5.5 BILLION BY 1991**

MOUNTAIN VIEW, CA, AUGUST 28, 1987 - Federal demand for professional services will continue to grow over the next five years creating significant opportunities for experienced professional services firms, states a new report from INPUT, a leading computer and communications industry market research firm. Between 1987 and 1991, federal contracting for professional services will increase 12% annually, from \$3.2 billion in 1986 to \$5.5 billion in 1991. The report identifies key indicators leading to this increase.

The report titled Federal Government Professional Services Market, 1986-1991, forecasts federal needs in the professional services area by both agency type and functional concentration. Systems integration will command the greatest share of professional services support, growing from \$900 million in 1986 to \$1.65 billion in 1991, at an average annual growth rate of 16%. In addition, federal agencies' reliance on the private sectors will grow in the following areas:

- Programming and analysis.
- Education and training.
- Facilities management.
- Consulting.

.....more

THE  
CONSTITUTION OF THE  
UNITED STATES OF AMERICA

Article I  
Section 1  
All legislative Powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives.

Section 2  
The House of Representatives shall be composed of Members chosen every second Year by the People of the several States, and the Electors in each State shall have the Qualifications requisite for Electors of the most numerous Branch of the State Legislature.

Section 3  
The Senate of the United States shall be composed of two Senators from each State, chosen by the Legislature thereof, for a Term of six Years; and each Senator shall have the Qualifications requisite for Senators of the most numerous Branch of the State Legislature.

While opportunities will increase, the report states that professional services firms will find the competition tougher and the marketplace highly demanding. Large professional services firms will face growing competition from small and minority-owned businesses (to whom agencies often give bidding preference) and large aerospace firms. Further, many agencies will increase emphasis on price in proposal evaluations forcing narrower profit margins and tightly controlled overhead.

To prosper in this marketplace, the INPUT report recommends:

- More selectivity on proposal activity.
- Better agency positioning.
- Improved pre-solicitation intelligence gathering.
- Earlier executive management involvement in marketplace thrusts.

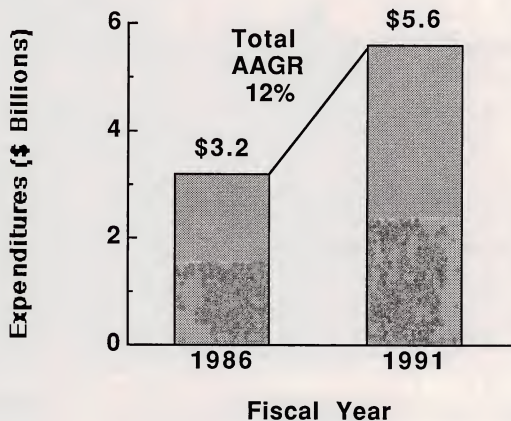

The report also recommends that professional services firms increase their teaming activities, particularly as subcontractors to small businesses, who can effectively prime many proposals.

Federal Government Professional Services Markets, 1986-1991 is available from INPUT at 8298-C Old Courthouse Road, Vienna, VA 22180, (703) 847-6870, or by calling INPUT's new headquarters office at (415) 961-3300.

History

History of the United States

The history of the United States is a long and complex one, spanning over two centuries. It begins with the first European settlers in the early 17th century, who established colonies along the eastern coast. These colonies were founded for various reasons, including religious freedom, economic opportunity, and the desire for a new life. Over time, these colonies grew and developed, and they began to assert their independence from British rule. This led to the American Revolution, which was a pivotal moment in the nation's history. The revolution resulted in the United States becoming an independent country, and it set the stage for the development of a new government and a new way of life. The history of the United States is a story of growth, change, and the pursuit of a better future.

Geography

The geography of the United States is diverse and varied, with a wide range of landscapes and climates. The country is home to some of the most beautiful and iconic landscapes in the world, including the Grand Canyon, the Rocky Mountains, and the Great Plains. The climate in the United States varies greatly from region to region, with the warm, sunny weather of the South and the cold, snowy weather of the North. The geography of the United States has played a significant role in the development of the country, influencing its economy, its culture, and its way of life. The United States is a land of endless possibilities, and its geography is a testament to the power of nature.

## PROFESSIONAL SERVICES MARKET

Source: INPUT

1. The first part of the paper is devoted to the study of the properties of the function  $f(x)$  defined by the equation

$$f(x) = \int_0^x \frac{1}{1+t^2} dt.$$

It is shown that the function  $f(x)$  is increasing and concave down on the interval  $(-\infty, \infty)$ . Moreover, the function  $f(x)$  has a horizontal asymptote at  $y = \frac{\pi}{2}$  as  $x \rightarrow \pm\infty$ .

2. In the second part of the paper, we consider the function  $g(x)$  defined by the equation

$$g(x) = \int_0^x \frac{t}{1+t^2} dt.$$

It is shown that the function  $g(x)$  is an odd function and that it has a horizontal asymptote at  $y = \frac{\pi}{2}$  as  $x \rightarrow \pm\infty$ .

3. In the third part of the paper, we consider the function  $h(x)$  defined by the equation

$$h(x) = \int_0^x \frac{1}{1+t^4} dt.$$

It is shown that the function  $h(x)$  is an even function and that it has a horizontal asymptote at  $y = \frac{\pi}{2}$  as  $x \rightarrow \pm\infty$ .

4. In the fourth part of the paper, we consider the function  $k(x)$  defined by the equation

$$k(x) = \int_0^x \frac{t^2}{1+t^4} dt.$$

It is shown that the function  $k(x)$  is an odd function and that it has a horizontal asymptote at  $y = \frac{\pi}{2}$  as  $x \rightarrow \pm\infty$ .

5. In the fifth part of the paper, we consider the function  $l(x)$  defined by the equation

$$l(x) = \int_0^x \frac{1}{1+t^6} dt.$$

It is shown that the function  $l(x)$  is an even function and that it has a horizontal asymptote at  $y = \frac{\pi}{2}$  as  $x \rightarrow \pm\infty$ .
